Journal of Crystal Growth 178 (1997) 667–668

JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for directional solidification
– – of tin–bismuth alloys 657
– for solution growth
– – of sulphathiazole 378

Cellular growth
– of diamond on tungsten carbide 634
Computer simulation
– of chemical vapor deposition 505
– of crystal growth 258, 367, 593, 612
– of fibre growth 410
– of microdefect formation 468
– of strain field 268
– of thermodynamical equilibrium 513
– of twinning 402
Convection 505, 545, 612

Defects, interface
– of gallium nitride on sapphire 168
Device characterization
– electronic materials 157, 438
– lasers 539
Diamond 310, 315, 485
Diffusional control
– of dopants in III-nitrides 157
Doping
– of carbon in gallium arsenide 213

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 229, 459

Fullerene
– nucleation on C_{60} seeds 280

Growth simulation
– particle engulfment 574

Hydrodynamics, see Convection

Kinetics
– of arsenic diffusion in gallium arsenide 438
– of growth 102, 367, 398, 568, 634
– of metastable and stable phases 367

Lasers, see Device characterization
Lasers, crystals for
– dysprosium gadolinium vanadate 518
– frequency doubling 387
– gallium nitride 201
– methyl p-hydroxybenzoate 539
Lysozyme 393, 575, 653

Melt growth technique
– by Bridgman–Stockbarger method
– – of gallium arsenide 445
– by Czochralski method
– – of (dysprosium, gadolinium) vanadate 518
– – of gallium arsenide 445
– – of indium antimonide 422
– – of lithium niobate 345
– – of rare-earth gallium garnet 645
– – of silicon 459, 468
– – theory of periodic control 593, 612
– by floating zone method
– – of fibres 410
– – of neodymium yttrium aluminum borate 460
– by laser heated pedestal growth
– – of magnesium doped lithium niobate 529
– by micro pulling down
– – of lead tungstate 426
– by vertical gradient freeze
– – of gallium arsenide 445
Microgravity, growth under
– of hen lysozyme 393, 653
– of tin–bismuth alloy 657
Morphological stability
– of L-glutamic acid crystals 568

Nucleation
– of gallium nitride 147, 220
– of L-arginine phosphate 387
– of lysozyme 653
– of sulphathiazole 378
Numbers
– Biot 345

– Peclet 345
– Reynolds 505

Phase diagram
– of solid liquid 378
– of III-nitrides 1, 8, 102, 174
Precursor
– for cubic silicon carbide 513
– for III-nitrides 74, 134

Solid growth technique
– by precipitation
– – of radial alumina trihydrate particles 360
– by recrystallization
– – of III-nitrides 157
– by strain anneal
– – of gallium nitride 189
– – of hafnium nitride 189
Solution growth technique
– by Czochralski method
– – of copper gallium selenide 350
– by flux method
– – of diamond 485
– by gas antisolvent method
– – of sulphathiazole 378
– by gel method
– – of langbeinites 559
– – of protein crystals 393
– by high temperature high pressure
– – of diamond 310
– by high temperature methods
– – of III-nitrides 174
– by hydrothermal growth
– – of alpha-6 thiophene 585
– – of lead zirconate titanate powders 335
– – of quartz 648
– by low temperature method
– – of L-arginine phosphate 387
– – of L-arginine sulpho-phosphate 387
– – of lead zirconate titanate powders 335
– – of magnesium langbeinites 559
– by periodic crystal rotation
– – theory of convection 545
Superconductivity materials, high T_c
– film
– – of YBCO 479
Superlattices, multilayers
– of barium titanate/YBCO 479
– of III–V compounds 32, 45, 56, 431
Surface structure
– of gallium nitride 113
– of polished gallium arsenide 229

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of indium based nitrides 32
– – theory of heteroepitaxy 258
– by epitaxial lateral overgrowth
– – of multilayered indium gallium arsenide 268
– by liquid phase electroepitaxy
– – of indium selenium films 321
– by liquid phase epitaxy
– – of gallium arsenide 233, 242
– – of gallium selenide 242
– – of lithium niobate 524
– – of zinc selenide 242
– by metalorganic molecular beam epitaxy
– – of III-nitrides 74
– by molecular beam epitaxy
– – of aluminum nitride 87, 113
– – of boron nitride 87
– – of calcium fluoride 298
– – of gallium arsenide 45
– – of gallium nitride 45, 87, 102, 113, 189, 220
– – of indium aluminum arsenide 207
– – of indium nitride 113
– – of magnesium fluoride 287
– – of zinc selenide 246, 252
– – theory of tilt
– – – of gallium arsenide on silicon 276
– by supersonic jet epitaxy
– – of indium nitrides 32, 56
– – of magnesium titanate 355
– – of III-nitrides 134
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of carbon nitrogen phase 639
– – – of diamond 634
– – – of silicon carbide 495
– – through hydride vapor phase epitaxy
– – – of gallium nitride 147
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium nitride 56
– – – of gallium arsenide 213, 445
– – – of gallium nitride 56, 201

Vapor growth technique
– by combustion flame technique
– – of diamond 315
